

rock424us: Electrokinesis is the ability to control electricity. You can have a ton of fun with this. You can zap people, you can mess with electrical equipment, charge up batteries, and you might use this for health purposes. For example: You are having a heart attack. You can just place u hand over your heart, give it a boost of electricity and heal yourself. But still the best thing to do afterwards is to call the ambulance. Just follow the steps in order to learn how to accomplish electrokinesis. Step 1. Meditate for a good 10 minutes but keep in mind, the longer you meditate, the bigger the chances are for you to do this faster. Step 2. Get something that needs electricity to work. A Battery powered object will do just fine in this occasion. Hold this object in one hand. Place the fingers of the other hand in the battery terminals. Step 3. Visualize the electricity coming from the terminals into your hand. You should feel static. If it doesn't work the first time, try again. Remember, your supposed to be relaxed. Step 4. Now that you have stored the electricity in your hands, try to see it. It should look like an invisible hungry beast run to get it's prey. Charge your hands with this. Step 5. You should be able to feel the electricity by now. You should be able to mess with things that use electricity. Follow the steps. Step 1. Focus on the electricity. Make it go into your hands. You should feel a little static shock in your arms. Step 2. Imagine that your hands are big volt guns. Blast out the electricity like big bullets through the "holes" in front of the "volt guns" into the the appliance. Depending on what you're messing with, you can do a lot of stuff. Ex: If u do this to a tv, you can change the channels automatically, increase/decrease the volume, turn off the tv, and a whole bunch of other stuff. Sounds like fun don't it? heh. Zapping Step 1. All you got to do is send a blast to the person you want to zap. Mischief These are some fun things to try with electrokinesis. #1. You can go to your window, and change the channels on the tv that your neighbor is watching. #2. Every 10 minutes in class, shock your teacher. He wont know what hit him because he can't see the electricity. #3. When you're in your car on a road trip and feel like using your laptop but your battery is dead, just send a bolt of electricity to charge it. And to connect to the internet, just send a bulge to the phone lines from the modem hole on the laptop. Try to focus the electricity getting real fast for faster internet speed. Try to think up other ideas.

d\_redant: ok... i need to ask something

d\_redant: do i need to charge up with a appliance that has battery poles each time?

rock424us: You don't charge it up.

rock424us: It charges you up.

rock424us: You just take in the electricity from the terminals

rock424us: it's better to have a battery in your hand

rock424us: just take in the electricity from the battery

rock424us: and once you get used to it then you don't even need a battery

rock424us: or a battery powered object

d\_redant: ok good

d\_redant: i'll try to master this
